Z-GLASS

See What's Within

Z-GLASS is a material with unparalleled properties that will allow you to successfully replace brittle glass elements in your functional prototypes and show what is within them. Its low shrinkage level makes it possible to 3D print defect-free models which will be durable and scratchproof, including automotive and electronics objects. With Z-GLASS, you can create light-transmitting objects that will remain unaffected by heavy exposure to light (high UV resistance) or most acids and alcohols, and weak alkalis. All these advantages make this material ideal not only for industrial sector but also for creating interior design elements.
